On the classification of remote sensing high spatial

High spatial resolution remote sensing images contain more spatial information of ground objects and show great diversity of them. Image segmentation is an essential step for object-based analysis of high spatial resolution remote sensing images [5]. Image segmentation is a process of dividing an image into

High Spatial Resolution - an overview | ScienceDirect Topics

High spatial resolution remote sensing is an area of considerable current interest and builds on developments in object-based image analysis, commercial high-resolution satellite sensors, and UAVs.

High Spatial Resolution Remote Sensing | Data, Analysis

Resolutions of Remote Sensing 1. Spatial (what area and how detailed) 2. Spectral (what colors “bands”) 3. Temporal (time of day/season/year) 4. Radiometric (color depth) Spatial Resolution describes how much detail in a photographic image is visible to the human eye. The ability to "resolve," or separate, small details is one way of describing what we call spatial resolution. 2 Spatial ...
