Moments moment of a force about a point calculation using the vector product torque induced by a couple components of torque about an axis Resultant moment sum of all moments about one point can be used to simplify problems Equilibrium free body diagram

### **Mechanics lecture 7 Moment of a force, torque, equilibrium**

Forces and Moments: Part 1 Moment of Force  $F$  around point  $O$ :  $MO$  The moment of a force about a point or an axis provides a measure of the tendency of the force to cause a body to rotate about the point or axis.  $oz$  plane  $xoy$  in which  $F_x$  lies  $F_x$  causes the pipe to turn about the  $z$ -axis  $F_x$  causes a moment about the  $z$ -axis =  $(Mo)_z$   $F_y$  passes through  $O$

to find the method of moments estimator  $\hat{\mu}$  for  $\mu$ . For step 2, we solve for  $\hat{\mu}$  as a function of the mean  $\hat{\mu} = g(\hat{\mu}) = \hat{\mu} - \hat{\mu}^2$ . Consequently, a method of moments estimate for  $\mu$  is obtained by replacing the distributional mean  $\hat{\mu}$  by the sample mean  $\bar{X}$ .  $\hat{\mu} = \bar{X} - \bar{X}^2$ . A good estimator should have a small variance.
