AE-681 Composite Materials - IITK

A composite material (also called a composition material or shortened to composite, which is the common name) is a material made from two or more constituent materials with significantly different physical or chemical properties that, when combined, produce a material with characteristics different from the individual components.

Composite material - Wikipedia

Structural materials have always been a key factor for the development of human society, starting with the use and modification of natural materials and, nowadays, culminating in production of a multitude of highly specialized synthetic materials, based on a broad variety of raw materials.

It has been a few years since the last comprehensive review, and considerable achievements of electrospun nanofibers for composite reinforcement has been seen in that period . In particular, glass, ceramic, and carbon nanofibers from electrospinning have been applied in reinforcing PNCs.
